Projects

❭Ecommerce Api
this api for an eccomerce website, the main advantage of this api services might include a mobile app, a website.
in this api you can retrieve,update and create products with custom options and prices of this product like (mobile phone can have 2 version 64gb and 128gb and these versions prices aren't equal)
and the permissions in this products endpoints are anyone can retrieve products but admin only can create or update prodcuts, also user can rate and comment on any product but user must ordered this product first.
an endpoint for creating and updating categories.
another endpoint for creating and updating brans.
a users endpoint that you can signup and login both operations retrieve jwt token.
a random password user enpoint that create a user with temp password from order informations if the user doesn't have an account.
a blog endpoint that admins can add some blogs and also loged in users can comment on this blogs.
an endpoint that creates orders (online,on cash), also this endpoint can retrieve the orders that this user ordered.
email send after every placed order.
email endpoint : here admin can add some email addresses to recieve mails if any order placed.
an endpoint for online payment using sadad payment gateway.

contact us endpoint that recieves the messages from users.
